

Erratum for the paper "Online Database of the Class I Methanol Masers"

In the conclusion section, the sentence «*interferometric data on maser spots is given in the separate table maser_spots and contains ~15,000 observations of maser spots in ~460 sources*» **related to both class I and class II** methanol maser spot data, not only to class I.

When counting maser spots only for class I methanol maser sources, there will be 4,740 maser spots in 389 source groups. Class II methanol maser database store 11,858 maser spots for 441 source groups. The sum of maser spots for both class I and class II masers will be then ~15,000.

The author apologizes for inaccurate sentence in the conclusions.
